

Restore, Protect and Preserve The Life of your Asphalt Roof

*With Provider Construction & Roofing's
Complete Restoration System for Degraded Asphalt Roofs*

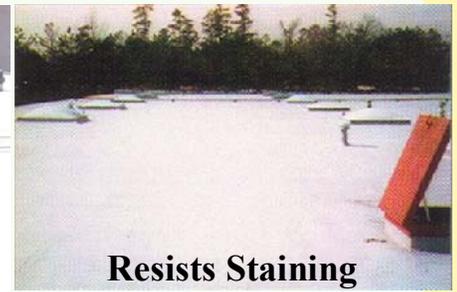

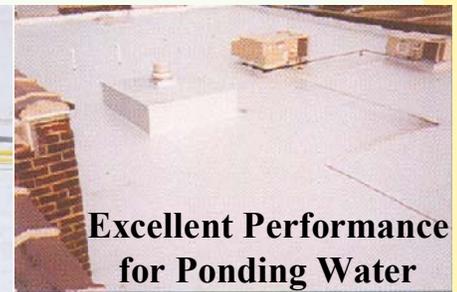

Common Failures

The Problems

Asphalt Weathers and Degrades Quickly

- ✓ Harsh UV Energy from the sun oxidizes the surface asphalt producing chalk-like residue.
- ✓ Long term weathering leaches plasticizers from the asphalt surface where the sun oxidizes them, leaving the asphalt brittle, susceptible to cracking, alligatoring and seam failures.
- ✓ Water penetrates the asphalt membrane through cracks, saturating the scrim or felt and producing dimensional changes from freeze/thaw and swell/shrink cycles, creating blisters, cracks and leaks.
- ✓ Black oxidated asphalt can exhibit surface temperatures over 160 degrees F.

Provider's Solutions

Cool

- ✓ 84 % reflective elastomeric acrylic reduces energy cost and damage caused to asphalt roofs by UV rays.
- ✓ Lowers roof temperatures; Increases life and efficiency of HVAC units.

Restore

- ✓ Repair blisters, cracks and leaks with like materials. Use fabric, caulk and coating for minor repairs.

Protect

- ✓ Existing asphalt is protected against the aging process with Provider's highly reflective Elastomeric Acrylic or Polyurethane coatings.
- ✓ Permanently blocks the UV, protecting the asphalt surface from the sun.
- ✓ Produces a weather resistant barrier.

Provider's Solutions Cont.

Preserve

- ✓ By installing Providers' coatings and using them as a "sacrificial barrier" to the environment, you will dramatically reduce the harmful effects of the UV rays, reduce thermal shock, and extend the useful life of your asphalt roof. Longer roof life means less debris in landfills and a higher **Return on Investment.**

Low Cost

- ✓ Repair of cracks, blisters and seams is fast and economical. Elastomeric coatings are easily sprayed or roller applied and requires little maintenance.
- ✓ Adaptable to nearly every type of asphalt membrane.
- ✓ Restoration costs can be expensed as a repair or maintenance, while re-roof costs must be capitalized.
- ✓ Restoring the existing roof may be as little as 25% of the total tear-off and replacement cost.
