

# Restore Your Old, Rusty, Leaking Metal Roof With Provider Construction & Roofing's Metal Cool Roof Restoration System

## Provider's Systems

- ✓ Highest Performing Systems
- ✓ Lowest Applied Cost

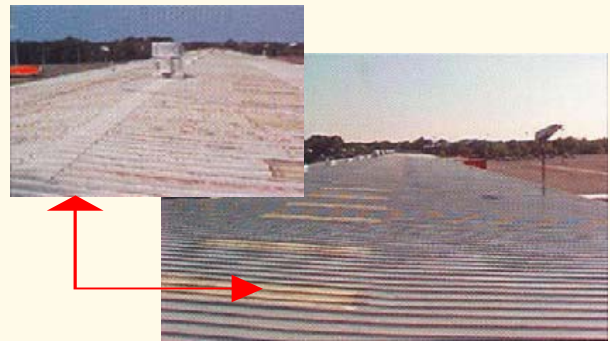

## Cool

Dramatically reduce energy costs with an 82% reflective coating. This reflective coating significantly reduces the thermal shock on your metal roof thereby extending its useful life.

## Restore

Inhibit further metal deterioration by rust-proofing. Stops rust even in the most severe conditions.

Restore by stopping rust with an applicable primer.

## Proven Performance

Providers' coating systems have over 20 years of proven performance and are tested and approved by UL and FM Global. The coatings we use are often specified by architects and consultants and applied with confidence by our certified applicators. The restoration process is the economical and environmentally friendly alternative to roof replacement. Guaranteed and warranted peace of mind - a system that works.

## Protect

Provider seals seams, fasteners and penetrations. Our sealant works without the use of fabric reinforcement! It has the capacity to adhere, stretch and flex as the building moves, and yet remains extremely strong.

**Protect** by stopping leaks with our sealer.

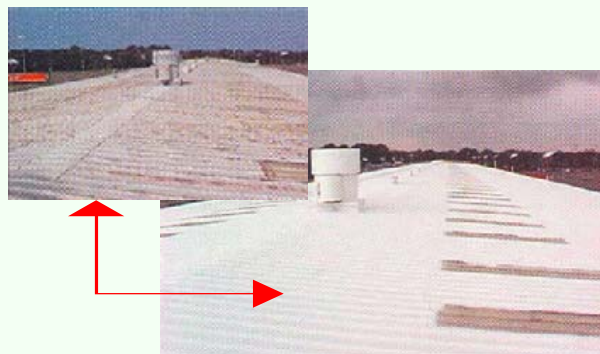

## Low Cost

All of Providers' restoration systems are designed to maximize performance as well as contractor and building owner savings by using technology to lower labor cost. Restoration may be expensed as a repair or maintenance cost while roof replacement must be capitalized.

## Preserve

Providers' highly reflective finish coats reduce the thermal shock experienced by metal during extreme temperature fluctuations, minimizing expansion and contraction of the roof and helping to reduce cooling cost.

**Preserve** by extending roof life with Providers' highly reflective finish coats.
